Recognition & Rewards

About the survey

- The survey was created almost from scratch by workshop participants at the 2023 Recognition & Rewards festival in Utrecht, The Netherlands 20230413.
- The survey was primarily an experiment to create an impromptu survey during a pressure cooker session and a means to discuss the topic focussing on what we do not yet know. The results should be interpreted with that in mind and also account for the fact that the sample of researchers and support staff at the festival and those with access to the RRview platform is a very skewed subset of all researchers and support staff.
- Creation took participants 50 minutes, organizers deduplicated, selected and implemented questions and answer categories in Qualtrics, which took another 40 minutes.
- The survey consisted of 10 closed questions and 1 open question and took less than 5 minutes to complete.
- Respondents were allowed to skip questions.
- The survey was open from 2-4 PM for respondents physically present at the festival (~200?).
- The survey was also open for another week at the (closed) R&R platform RRview.
- In total 64 responses were recorded, 55 of which at the festival itself and 9 afterwards.
- The questionnaire has this introduction: “How can the recognition and rewards movement be more inclusive of supporting roles in research? This survey aims to identify issues that support staff are confronted with in research institutions, and explore possible solutions.”
- The following slides contain graphical results for each question.

Question 1 (n=53)

In your experience, are support staff and academic staff equally valued?

Question 2 (n=54)

Where in the continuum (from academic to support) would you say most of your activities are?

Question 3

To which part of the academic process do you actively contribute? (select all that apply!)

Question 4 (n=54)

Does your function description reflect the actual work that you do?

Question 5

Do you experience obstacles in combining roles?

● Choice Count

Question 6 (n=55)

Do you feel like your line manager is capable of assessing the work/ tasks that you do?

● Choice Count

Question 7 (n=26)

If you moved from an academic to a support function, did you benefit from it in your development?

no yes

Question 8 (n=55)

Could a support staff member, in principle, be a PI (Principal Investigator)?

no yes

Question 9

What is the added value of working in a hybrid team (with both, academic and support staff)?

This could bring more complementarity instead of all team members being from "kind of" the same background. It can bring alternative views and teams can rely and be supported by each others expertise.

all work is cross-functional, so how can you NOT work in a hybrid team? It is the only way to get the job done

diversity of skills and experiences

Multiple types of expertise can be used more efficiently

Complementarity of expertise and functions; provide meaning to support role

The ability to combine insights from both corners of the university (theoretical/conceptual and applied/functional), and also to challenge each others' thinking on certain practices and their underlying rationales (in my specific case, concerning research data management)

Skills mix

We need both disciplines for a well functioning research ecosystem I think. Personally I feel valued for the work I am doing as a support staffer. I very much identify with that role and am happy I did not proceed an academic career. I enjoy working in the academic sector though. Feel privileged I sometimes have the opportunity to do a bit of research sometimes.

Everybody has distinct skills and experiences, interdisciplinarity in broad sense

Belonging

People with different needs, wants, and skills. Complementary

More efficiency, effect, impact

Support staff can be rewarded for their input and work in the projects

Increase in quality

Enrichment of perspectives

Diversity of skills

Better quality, expansion of viewpoints and expertise

Broader view and expertise

Diversity of knowledge and network

Broadening perspectives

Question 10 (n=56)

You are:

Other:

enabler

Mixed

Management

PhD student

Business owner

Funder

External support

Management

Question 11 (n=56)

You are:

● Choice Count
